SciComp II - Exercise return format

Returning the exercises

- All exercises consist of 6 problems.
- Most of these require self written source code with **Fortran**.
- The exercises should be returned on time. If however there are delays, you will lose points according to section "Late returns"

Help?

- **TA SESSIONS** (this is the primary way for TAs to help you)
- Telegram group (link on the moodle page)
- Email
- Moodle forums
- Other students

The infamous Return format

- **ONE** zip or tar file (a compressed file storage format) labeled firstname_lastname_ex#.zip (or .tar, #is replaced by the exercise number)
- Within this file there should be 6 folders, one for each problem
- The folders should be labeled p1, p2, …, p6
- Within these folders there should be the fortran source file (your code) for the current problem, labeled p#.f90 (#is the number of the problem), and additional files needed to compile the program (external modules, data input files, etc.)
- In case a problem has multiple parts (a part and b part for example) you can either
  - Put both source files within the same folder, but be sure to label the source files with p#a.f90 and p#b.f90 **OR**
  - Instead of having one folder for the problem you can create two and label them accordingly p#a and p#b and have the corresponding files in these folders.

Late returns

- If your submission is late, your points will be multiplied by a factor c given by

$$c = 2^{-\Delta t/t_0} \tag{1}$$

- t_0 is 24 hours, and Δt is the time passed since deadline rounded to the nearest hour.

Problems

- Every problem has 4 written parts:
  - **Compilation**: The terminal command you use to compile the source file you provide
  - **Execution**: The terminal commmand used to run your compiled program
  - **Output**: What does your program print to the terminal when it is ran
  - **Explanation**: Explain what you have done to get your code to work. What kind of programming methods you have used and explain any new functions or subroutines you may have written. If the problem comes with conceptual questions, give answers to those here.
- These can be returned in **2** ways:
  - Either in an external text or pdf file that is returned within the zip/tar file. In this case you have one text/pdf file with these answers to **ALL** problems in the zip/tar files base (not in any of the folders). Note that this file does not have a specified naming convention, you can name it what you think is appropriate. **OR**
  - In the moodle return box. DO NOT confuse this with moodle submissions comment box.

zip/tar file structure

```
firstname_lastname_ex#.zip/
├── p1/
│   └── p1.f90
├── p2/
│   └── p2.f90
├── p3/
│   ├── p3a.f90
│   └── p3b.f90
├── p4/
│   └── p4.f90
├── p5/
│   └── p5.f90
├── p6/
│   ├── p6.f90
│   └── mod1.f90
└── whatever_is_appropriate.pdf
```
